

### Dynex Semiconductor Ltd.

#### Updated statement of RoHS compliance April 2006

The European Union's directive 2002/95/EC on the "Restriction of Hazardous Substances Directive" (RoHS) was published on 13th February 2003. It controls the use of specified hazardous substances in electronic and electrical equipment sold in Europe from 1<sup>st</sup> July 2006. The materials specified are lead, mercury, cadmium, hexavalent chromium, and certain flame retardants used in plastics: polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE).

Dynex Semiconductor Ltd (Dynex), as a producer of high power semiconductor components, is committed to complying with the RoHS directive as a minimum standard within its ISO 14001 environmental policy, and to fully support its customers in their compliance.

**Dynex confirms those all-discrete bipolar products, IGBT modules, and SAW filters are fully compliant with the RoHS directive.**

Dynex do not intend to make any changes to part numbers or package labelling as a result of RoHS. This decision results from the fact that the vast majority of products have not required modification because they do not contain any of the restricted substances. The few products that have required change have only been altered internally and there is no difference in product performance or characteristics. With no external solder on any parts there are also no issues with customer's soldering methods.

It is also the case that the majority of applications for Dynex products are outside the scope of the RoHS directive. However if any customer has concerns regarding any product or would like further information on Dynex and RoHS then please contact the company.
