

Replacement and Refurbishment Service

Power Assemblies

Helping to extend the life of your assemblies

- **Prevention of Failure or Upgrading** - When a device comes to the end of its life and you want to prolong this or upgrade to newer technology, we can replace these along with the accompanying components
- **Diagnosing Potential Faults** - We are experienced in identifying common faults in the ancillary components in Power Assemblies, including gate drives, Snubber components and cooling systems
- **Routine Touch Up or Complete Refurb?** - Whether you require a whole refurbishment or just a routine replacement of components we can help make sure your product lasts as long as possible and continues to meet the required regulations
- **One Stop Shop** - We have a long established supply chain for components such as insulators, snubber capacitors, gate drives and of course the semiconductor devices
- **Thousands or Just the One?** - We have sufficient manufacturing resources to ensure that we can deal with higher volumes of business, but we are happy to deal with one off assemblies if required
