

# Semiconductor Subcontract Power Assembly

Power Assemblies

We have experience in creating robust  
and reliable electromechanical assemblies

- We have experience in creating robust and reliable electromechanical sub systems
- Specialise in mounting high voltage high current components which other manufacturers do not offer
- Developed efficient techniques to ensure the optimal performance of the thermal interfaces and the contact resistances
- Our team uses Poka-Yoke tools and equipment to guarantee the correct mountdown of IGBT and Diode modules minimising potential failures
- Lean manufacturing facility in a clean room environment
- Full data traceability for all products assembled
